

# Walking Hearth Type Reheating Furnace

- The walking hearth furnace consists of a stationary hearth and a movable hearth.
- Materials to be heated are carried by the movable hearth which moves rectangularly, i.e. they go up and down, forward and backward.
- Since the movable hearth and the stationary hearth are covered with a refractory material, skid marks are not spotted on materials.
- Since it doesn't use the water cooled beam, it has few water cooling losses.
- Perfect for heating small cross section billets and round billets.
- It's easy to operate.

Manufactured By Precimax in Collaboration With YIU HW A ENGINEERING CO., LTD TAIWAN
